$x = 2$. To find the value of y , substitute 2 for x in the first equation. $y = -3(2) + 4 = -6 + 4 = -2$. Therefore, the solution of the given system of equations is $x = 2, y = -2$. Check this solution by substituting the values into the second equation and making sure the resulting equality is true. 2. A.

After helping many middle school students (who despised math) learn to LOVE Algebra, I decided to try to help more students around the world get rid of their fears and frustrations of Algebra. Most students don't do well in Algebra because they don't have the basic "building blocks" or foundation in order to understand more difficult concepts.
