Physics galaxy by Ashish Arora is a result of deep stress and serious efforts of the brain of distinguished academician Ashish Arora to ensure fundamental understanding and advance applications of concepts in Physics. This series includes four books which cover the complete syllabus of class XI and XII. In these books, under each topic numerous illustrations are included for better understanding of the concept. Also to help in understanding the right method to solve questions, systematically step by step approach is adopted in easy and simple explanation for each solved Example. After every topic comprehensive time bound tests are given to strengthen the objective and comprehensive abilities of students. You can also avail access to the world's largest encyclopaedia of online video lectures for high school Physics at www.Physicsgalaxy.Com. These exclusive lectures are prepared by Ashish Arora. Everyday view count of these lectures is 30000+ and till now more than 24 million lectures have been watched by students in 180+ countries. Physics galaxy is undoubtedly among the best Physics textbooks for Class XI and Class XII. Some highlights of the book include: a. Systematically step-by-step approach for easy understanding B. Time bound tests after every topic C. As per latest syllabus.

You may not qualify as a scientist, but you love reading science fiction and are intrigued by problems of time, space, mind, and reality. You'd like nothing better than to explore the solar system, travel to the stars, and really penetrate the mysteries of hyperspace, curved space, black holes, and supernovae. The Cosmic Dancers will take you through the most challenging concepts of modern physics with the aid of examples from such masters of science fiction as Isaac Asimov, Robert Heinlein, Arthur C. Clarke, Robert Silverberg, and Ursula K. Le Guin, not to mention their predecessors H. G. Wells, Jules Verne, and Cyrano de Bergerac.

This multi-language dictionary covers the eight major Turkic languages: Turkish, Azerbaijani, Turkmen, Uzbek, Uighur, Kazakh, Kirgiz, and Tatar. 2000 headwords in English are translated into each of the eight Turkic languages. Words are organized both alphabetically and topically. Original script and Latin transliteration are provided for each language. For ease of use, alphabetical indices are also given for the eight languages. This is an invaluable reference book for both students and learners and for those engaged in international commerce, research, diplomacy and academic and cultural exchange.

The work presented in this thesis tackles the problem of analyzing images corrupted by non-Gaussian, impulsive noise. In particular, we examine the problems of target detection in foliage-penetrating (FOPEN), ultra-wideband (UWB) synthetic aperture radar (SAR) images and microcalcification in digital mammograms. They are challenging problems because the images contain naturally occurring signals such as backscatter from trees and normal breast tissue which are impulsive in nature. The first step in attacking these problems is to consider the image formation process for each image modality. We develop statistical-physical models for foliage clutter in FOPEN SAR and breast tissue in mammograms by modeling the physics of the image formation process and the distribution of noise sources. The models explain why the data are impulsive and advocate the use of alpha-stable distributions to describe the noise. Consequently, we design optimal detection algorithms based on the stable model that are

robust to impulsive noise.

Many people agree that prayer is a central feature of spiritual life. But what is prayer? *Scientific and Pastoral Perspectives on Intercessory Prayer: An Exchange Between Larry Dossey, MD, and Health Care Chaplains* explores common questions and concerns about intercessory prayer, or the act of praying for the benefit of others, from several different points of view. Chaplains, priests, ministers, and clergy in the health care profession will learn how prayer is examined from sources other than traditional Christian views, such as parapsychology. From *Scientific and Pastoral Perspectives on Intercessory Prayer*, you will learn what prayer means to some chaplains and to their ministry and how prayer can make drastic changes in the lives of your parishioners, patients, and their families. Written by eight chaplains, the articles in this text are in response to an essay by Larry Dossey, a nationally known physician who speaks and writes about prayer. The contributors to *Scientific and Pastoral Perspectives on Intercessory Prayer* discuss his points of view on intercessory prayer, which are based on quantum physics. You will learn if this area of physics can make a difference in how you practice your faith, how you worship, and what you think about or expect from prayer. *Scientific and Pastoral Perspectives on Intercessory Prayer* examines several other topics related to prayer, including: discovering whether or not intercessory prayer is truly different from other methods of meditation exploring the relationship between intercessory prayer and meditative or praise prayer linking prayers and their results to the expectations or intentions of those who engage in them differentiating between an intercession and a wish deciding for yourself what constitutes evidence or proof when discussing the aspects of prayer how our opinion of prayer relates to how we think about the universe and about God Since *Scientific and Pastoral Perspectives on Intercessory Prayer* focuses on the cooperation between science and theology, you will discover that, in many instances, people believe that the power of prayer should be taken seriously. This text also shows you how the questions and functions of prayer are shared by everyone, despite religious differences or methods of praying. Encompassing research and personal experiences, *Scientific and Pastoral Perspectives on Intercessory Prayer* will help you answer questions about religion and its role in the lives of parishioners, patients, and clergy, as well as provide you with evidence to the positive and healing power of prayer.

“ . . . an important and outstanding contribution. ” —Erich von Däniken, bestselling author of *Chariots of the Gods* “ The Ancient Alien Question provides a captivating adventure around the world and sheds an interesting perspective on the Ancient Astronaut Theory. ” —Giorgio A. Tsoukalos, producer of *Ancient Aliens: The Series* “ Philip Coppens covers all the bases on this controversial topic. His research is thorough and he addresses each topic with a balanced overview that cuts through the jungle of confusion with a very sharp machete of reason. ” —David Hatcher Childress, author of *Technology of the Gods* The Ancient Alien Question reveals an array of astonishing truths, including: A radically different understanding of the pyramids and how they were constructed The extraordinary stories behind monuments such as the Nazca lines and Puma Punku How extraterrestrials came to our planet and the evidence that supports this Analyzing the historical and archaeological evidence, Philip Coppens demonstrates that there is substantial proof that our ancestors were far more technologically advanced than currently accepted, and that certain cultures interacted with nonhuman intelligences. Our ancestors were clearly not alone. Fifty years after Erich von Däniken posed these questions in *Chariots of the Gods*, Coppens provides clear, concise answers to the great historical enigmas in an accessible, readable format. Your view of human history will never be the same again!
