We're going to start with the Bayesian version. And then the last few lectures we're going to talk about the non-Bayesian version or the classical one. By the way, I should say that statisticians have been debating fiercely for 100 years whether the right way to approach statistics is to go the classical way or the Bayesian way. And there have ...

BayES is a software package designed for performing Bayesian inference in some popular econometric models using Markov Chain Monte Carlo (MCMC) techniques. Bayesian inference traditionally requires technical skills and a lot of effort from the part of the researcher, both in terms of mathematical derivations and computer programming.

Although Bayesian econometrics is increasingly being used in applied research, programs of study in economics usually include courses only in frequentist econometrics, even if time allows for more than a single course. Apart from tradition, this bias towardsthe frequentist approach to statistical inference can be attributed to the lack of specialized software for Bayesian econometrics. This ...

This article presents the challenges that arise since macroeconomists often work in data-rich environments. It emphasizes multivariate models that can capture the co-movements of macroeconomic time series analysis. It discusses vector autoregressive (VAR) models distinguishing between reduced-form and structural VARs. Reduced-form VARs summarize the autocovariance properties of the data and ...
