This updated introduction to the clinical applications of pharmacokinetics looks at gastrointestinal absorption, prolonged release medication, and drug disposition. The effects of disease, weight, age, sex and genetic factors on pharmacokinetic variability and drug response are detailed. Bioequivalence and regulatory considerations for generic drug.

Biotechnology and Biopharmaceuticals: Transforming Proteins and Genes into Drugs, Second Edition addresses the pivotal issues relating to translational science, including preclinical and clinical drug development, regulatory science, pharmaco-economics and cost-effectiveness considerations. The new edition also provides an update on new proteins and genetic medicines, the translational and integrated sciences that continue to fuel the innovations in medicine, as well as the new areas of therapeutic development including cancer vaccines, stem cell therapeutics, and cell-based therapies.

Lymphatic Transport of Drugs provides a thorough review of the determinants that affect the uptake and delivery of drugs and xenobiotics to the lymphatics. Factors affecting the transport and delivery of lipophilic drugs through the lymph after oral administration, lymphatic transport of polar drugs and macromolecules after gastrointestinal dosing, transport of drugs into the lymph after parenteral administration, and particulate drug delivery systems are among the topics examined in this volume. Lymphatic Transport of Drugs is primarily intended for pharmaceutical scientists who are attempting to alter the delivery of current therapeutic agents through formulation of produgs, as well as for researchers designing new drugs for lymph delivery.
