A more recent study reported that HIV testing in clinical settings is cost-saving by using a model with consistent, standardized methods of evaluating the costs and effects of established and emerging HIV prevention strategies. 4 The unit cost of testing was adjusted by the positivity rate of persons tested (0.6%), drawn from reports of HIV testing at CDC-funded sites, to derive a cost per new diagnosis. The estimated cost per case of HIV prevented for testing in clinical settings was less ...

Screening for Antibody to the Human Immunodeficiency Virus

Allocation Case Study 1 CDC's single largest investment in HIV prevention and a central component of its HIV prevention strategy is providing funding to health departments. i The funding cycle that began in Fiscal Year (FY) 2012 represented a new direction in achieving a higher level of impact with every federal HIV prevention dollar.

HIV Prevention Programs | HIP Case Studies | CDC

CDC recently published research findings external icon that estimate the window period for 20 U.S. Food and Drug Administration (FDA)-approved HIV tests. The study showed that laboratory testing using antigen/antibody tests detects HIV infection sooner than other available tests that detect only antibodies. If a person gets a laboratory-based antigen/antibody test on blood plasma less than 45 days after a possible HIV exposure and the result is negative, follow-up testing can begin 45 days ...
