Pricing Credit Default Swaps - Term Structure Models II ...

The main idea of a Credit Default Swap (CDS) is to transfer the credit risk of a reference entity from one to another party. In a CDS the party A (protection buyer) pays a periodic insurance premium ("spread") 1 to the counterparty B (protection seller) until the maturity, or until the reference entity defaults. On the other hand the protection buyer receives a payoff from the protection seller only if the reference entity experiences a credit event.

(AIG), Pacific Investment Management Company, and the Citadel hedge fund. They didn't expect all the debt to come due at once.

Credit Default Swaps: Definition, Pros, Cons, Crises

A bank has loaned \$40 million to a company for 5 years requiring periodic interest payments equal to LIBOR + 2.2%. The bank's policy requires all loans to be backed by a credit default swap on the principal amount of loans made. In this case, the bank can buy a CDS with a notional amount of \$40 million. The CDS costs 2%.
