This book deals with the life and works of the great Russian scientist Dmitry Ivonovich Mendeleev (1834-1907), discoverer of the Periodic Law of the Elements. Mendeleev's work had many features that were typical of advanced Russian natural science as a whole. He possessed a breadth of vision that led him into many fields of scientific work. The main feature of Mendeleev's work was the importance he attached to linking theoretical work with practice, with life. As an epigraph to his *Foundation of Chemistry* he chose the prophetic words: "What science sows the people will

reap." On whatever problem he was working, all his deeds were inspired by the wish to help the development of the productive forces of his native land and to advance technique and science in Russia. He drew up a long-term program for exploiting Russia's extremely rich natural resources and applying chemistry to various branches of the nation's economic life. He is rightly known as the initiator of the wide application of chemistry to Russian industry and agriculture. It was Mendeleev who conducted the first serious agrochemical research in Russia. He established the first network of agricultural experimental stations. Supervising the work of the Chamber of Weights and Measures he prepared the introduction into Russia of the metric system.

This is the first English-language collection of Mendeleev's most important writings on the subject, consisting of 13 essays and offering a history of the law's development by its own founder.

In 1869 Russian scientist Dmitri Mendeleev was puzzling over a way to bring order to the fledgling science of chemistry. Wearing out by the effort, he fell asleep at his desk. What he dreamed would

fundamentally change the way we see the world. Framing this history is the life story of the nineteenth-century Russian scientist Dmitri Mendeleev, who fell asleep at his desk and awoke after conceiving the periodic table in a dream—the template upon which modern chemistry is founded and the formulation of which marked chemistry's coming of age as a science. From ancient philosophy through medieval alchemy to the splitting of the atom, this is the true story of the birth of chemistry and the role of one man's dream. In this elegant, erudite, and entertaining book, Paul Strathern unravels the quixotic history of chemistry through the quest for the elements.

and disciplines (Mathematics), general themes (Romantic Science) and central concepts (Paradigm and Fact). The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn.

Chemical science has made major advances in the last few decades and has gradually transformed in to a highly multidisciplinary subject that is exciting academically and at the same time beneficial to human kind. In this context, we owe much to the foundations laid by great pioneers of chemistry who contributed new knowledge and created new directions. This book presents the lives and times of 21 great chemists starting from Lavoisier (18th century) and ending with Sanger. Then, there are stories of the great Faraday (19th

century) and of the 20th century geniuses G N Lewis and Linus Pauling. The material in the book is presented in the form of stories describing important aspects of the lives of these great personalities, besides highlighting their contributions to chemistry. It is hoped that the book will provide enjoyable reading and also inspiration to those who wish to understand the secret of the creativity of these great chemists.
