Lasers are progressively more used as versatile tools for fabrication purposes. The wide range of available powers, wavelengths, operation modes, repetition rates etc. facilitate the processing of a large spectrum of materials at exceptional precision and quality. Hence, manifold methods were established in the past and novel methods are continuously under development. Biomimetics, the translation from nature-inspired principles to technical applications, is strongly multidisciplinary. This field offers intrinsically a wide scope of applications for laser based methods regarding structuring and modification of materials. This book is dedicated to laser fabrication methods in biomimetics. It introduces both, a laser technology as well as an application focused approach. The book covers the most important laser lithographic methods and various biomimetics application scenarios ranging from coatings and biotechnology to construction, medical applications and photonics.

Detective Sergeant Mariko Oshiro has been promoted to Japan ' s elite Narcotics unit—and with this promotion comes a new partner, a new case, and new danger. The underboss of a powerful yakuza crime syndicate has put a price on her head, and he ' ll lift the bounty only if she retrieves an ancient iron demon mask that was stolen from him in a daring raid. However, Mariko has no idea of the tumultuous past carried within the mask—or of its deadly link with the famed Inazuma blade she wields. The secret of this mask originated

hundreds of years before Mariko was born, and over time the mask ' s power has evolved to bend its owner toward destruction, stopping at nothing to obtain Inazuma steel. Mariko ' s fallen sensei knew much of the mask ' s hypnotic power and of its mysterious link to a murderous cult. Now Mariko must use his notes to find the mask before the cult can bring Tokyo to its knees—and before the underboss decides her time is up....

The Korean War (1950-1953) was the first - and only - full-scale air war in the jet age. It was in the skies of North Korea where Soviet and American pilots came together in fierce aerial clashes. The best pilots of the opposing systems, the most powerful air forces, and the most up-to-date aircraft in the world in this period of history came together in pitched air battles. The analysis of the air war showed that the powerful United States Air Force and its allies were unable to achieve complete superiority in the air and were unable to fulfill all the tasks they'd been given. Soviet pilots and Soviet jet fighters, which were in no way inferior to their opponents and in certain respects were even superior to them, was the reason for this. The combat experience and new tactical aerial combat tactics, which were tested for the first time in the skies of Korea, have been eagerly studied and applied by modern air forces around the world today. This book fully discusses the Soviet participation in the Korean War and presents a view of this war from the opposite side, which is still not well known in the West from the multitude of publications by Western historians. The reason for this, of course, is the fact that Soviet records pertaining to the Korean War were for a long time highly classified, since Soviet air units were fighting in the skies of North Korea "incognito", so to speak or even more so to write about this was strictly forbidden in the Soviet Union right up to its ultimate collapse. The given work is in essence the first major work in the post-Soviet era. First published in a small edition in Russian in 1998, it was republished in Russia in 2007. For the first time, the Western reader can become acquainted with the most detailed and informative work existing on the course of the air war from the Soviet side, now in English language. The work rests primarily on the recollections of veterans of this war on the so-called 'Red' side - Soviet fighter pilots, who took direct part in this war on the side of North Korea. Their stories have been supplemented with an enormous amount of archival documents, as well as the work of Western historians. The author presents a literal day-by-day chronicle of the aerial combats and combat work of Soviet fighter regiments in the period between 1950 and 1953, and dedicates this work to all the men on both sides who fought and died in the Korean air war.

Cellular telephones, satellite communications and radar systems are adding to the increasing demand for radio frequency circuit design principles. At the same time, several generations of digitally-oriented graduates are missing the essential RF skills. This book contains a wealth of valuable design information difficult to find elsewhere. It's a complete 'tool kit' for successful RF circuit design. Written by experienced RF design engineers from Motorola's semiconductors product section. Book covers design examples of circuits (e.g. amplifiers; oscillators; switches; pulsed power; modular systems; wiring state-of-the-art devices; design techniques).
