This volume explores the ethical questions that arise in the development, creation and use of robots that are capable of semiautonomous or autonomous decision making and human-like action. It examines how ethical and moral theories can and must be applied to address the complex and critical issues of the application of these intelligent robots in society. Coverage first presents fundamental concepts and provides a general overview of ethics, artificial intelligence and robotics. Next, the book studies all principal ethical applications of robots, namely medical, assistive, socialized and war roboethics. It looks at

such issues as robotic surgery, children-robot and elderly-robot therapeutical/social interactions and the use of robots, especially autonomous lethal ones, in warfare. In addition, a chapter also considers Japanese roboethics as well as key intercultural and robot legislation issues. Overall, readers are provided with a thorough investigation into the moral responsibility (if any) of autonomous robots when doing harm. This volume will serve as an ideal educational source in engineering and robotics courses as well as an introductory reference for researchers in the field.

If you had to interview the candidates for a country's new hangman, what questions would you ask them? If your family was on the verge of starvation, and becoming a hangman was the only job available, would you apply? If you were hired, what would you do if the prisoners looked like your loved ones? If you knew that another good man was taking the.

This book examines the health effects of exposure to static electric and magnetic fields found in selected industries, such as medical facilities with magnetic resonance imaging (MRI), high-energy physics research facilities and some transportation systems. To date, research on their health effects lags far behind the rapid advances in technology. Electric and magnetic fields are generated by natural phenomena such as the Earth's magnetic field, thunderstorms, and by man-made sources that use electricity. When such fields do not vary with time they are referred to as static. For static electric fields, studies carried out to date suggest that the main effect is discomfort from electric discharges to the body. For static magnetic fields, acute effects are only likely to occur when there is movement of a person in the field. For example, a person moving within a relatively high field can

experience sensations of vertigo and nausea, and sometimes a metallic taste in the mouth and perceptions of light flashes. Although only temporary, such effects may have a safety impact for workers executing delicate procedures, e.g. surgeons performing operations within MRI units. Even when at rest, a person will experience internal body movement, such as blood flow or heart beat. When placed within a high magnetic field, electrical fields and currents are generated around the heart and major blood vessels that can impede the flow of blood. Possible effects range from minor changes in heartbeat to an increase in the risk of abnormal heart rhythms that might be life threatening.

literary memoir of resilience, redemption, and growing up in the South. Barbara Robinette Moss was the fourth in a family of eight children raised in the red-clay hills of Alabama. Their wild-eyed, alcoholic father was a charismatic and irrationally proud man who, when sober, captured his children's timid awe, but when (more often) drunk, roused them from bed for severe punishment or bizarre all-night poker games. Their mother was their angel: erudite and stalwart -- her only sin her inability to leave her husband for the sake of the children. Unlike the rest of her family, Barbara bore the scars of this abuse and neglect on the outside as well as the inside. As a result of childhood malnutrition and a complete lack of medical and dental care, the bones in her face grew abnormally ("like a thin pine tree"), and she ended up with what she calls "a twisted, mummy face." Barbara's

memoir brings us deep into not only the world of Southern poverty and alcoholic child abuse but also the consciousness of one who is physically frail and awkward, relating how one girl's debilitating sense of her own physical appearance is ultimately saved by her faith in the transformative powers of artistic beauty: painting and writing. From early on and with little encouragement from the world, Barbara embodied the fiery determination to change her fate and achieve a life defined by beauty. At age seven, she announced to the world that she would become an artist -- and so she did. Nightly, she prayed to become attractive, to be changed into "Zeus's daughter," the goddess of beauty, and when her prayers weren't answered, she did it herself, raising the money for years of braces followed by facial surgery. Growing up "so ugly," she felt the family's disgrace all the more acutely, but the result

has been a keenly developed appreciation for beauty -- physical and artistic -- the evidence of which can be seen in her writing. Despite the deprivation, the lingering image from this memoir is not of self-pity but of the incredible bond between these eight siblings: the raucous, childish fun they had together, the making-do, and the total devotion to their desperate mother, who absorbed most of the father's blows for them and who plied them with art and poetry in place of balanced meals. Gracefully and intelligently woven in layers of flashback, the persistent strength of Barbara Moss's memoir is itself a testament to the nearly lifesaving appreciation for literature that was her mother's greatest gift to her children.
